This program will take place in Baztán, a mountain valley in northern Navarre. Local traditional urbanism, architecture and building details will be studied in order to create a preservation and new traditional building manual for the area. Hand drawing and measuring buildings will be the main activity to be developed each day. Experts in local vernacular architecture and building techniques will be lecturing on diverse related topics. There will be trips around this region and some workshops and building sites will be visited too. Local tradition will not only be studied, as the results of this two weeks research will be published, so it can also become an useful resource for future new buildings or restorations in the area. During the last days upgrade proposals for different public places of the town will be designed, using the manual previously developed as a guideline for them.
